# Welcome

Dear fellow sheep breeders

We are proud of the quality of the 200 rams we will present for sale. They are backed by 43 years of stud breeding experience, plus rigid testing within our own commercial breeding program.

This year we will continue to offer all of our stud rams at our annual sale. This year, we have included 20 Selected Stud Ewes to broaden the sale offering and to compliment the Selected Stud Rams. These will be auctioned off prior to the rams (despite being lotted last in the catalogue). The quality of the rams on offer continues through right to the last lot.

We invite your inspection and encourage your feedback and honest assessment of our Coolawang Border Leicesters. We look forward to catching up with you and answering any queries you may have on our stock.

*The James Family*

## MANAGEMENT OF YOUR NEW RAM

---

We have done our best to present the best of our annual draft of naturally reared, structurally sound rams for your selection. We undertake a program to provide sheep sold from this property free from Brucellosis and Ovine Johnes Disease. Rams are treated with Extinosad at shearing. Rams were vaccinated with Virbac Multimin to aid in the rams development as a productive sire.

From now on his management is very much your concern and will influence what his productive life will be in your breeding program. We wish you every success with your purchase, and being personally interested in his future we suggest;

That you insure your ram(s) for the next six months. He will be more susceptible to injury, death and loss of use in this time, than in any other period in his lifetime.

Place him in a secure paddock away from other rams and unjoined females until mating. Be aware that Brucellosis can be transmitted to rams from recently joined females, as well as sexually active males.

Border Leicester Rams are sold with at least three months wool to show fleece quality to a purchaser. Depending on your mating time shearing should be considered as rams work better with shorter wool. Flystrike and grass seed problems would be minimised.

Do not overwork him in his first season. Preferably put him with older ewes.

After use, treat him well. He is your investment for future years.

Maintain a drench and vaccination ( Glanery 7 in 1 ) program. Provide good nutrition and regular physical examinations to help ensure a long productive life.

Once again, Coolawang's first-cross ewes stole the spotlight at the 2022 Naracoorte Blue Ribbon 1.5 Year Old First Cross ewe sale, securing the coveted title of Best Presented Pen.

Pictured right, you can see the Elders Naracoorte Livestock Selling Team eagerly awaiting the commencement of the auction as they prepare to showcase Coolawang's First Cross Ewes.

Coolawang's outstanding offering set the pace for the day, reaching an impressive top price of \$426, claimed by LS Johnson & Son of Naracoorte. In total, 532 Coolawang ewes found new homes, boasting an impressive average sale price of \$391 per head.

The esteemed judge presiding over this event was Andrew Frick, hailing from Gypsum Hill Sheep Studs in Padthaway.

## COOLAWANG DRENCH RESISTANCE STATUS

---

Last year we were able to undergo another drench resistance trial. Over the last few year there has been attempts made however low counts have not made it possible to complete trials.

This years trial showed some reduction in efficacy for Whites, Abamectin and Moxidectin for *Ostertagia*. Numbers of *Trichostrongylus* and *Haemonchus* have been too low to retest in recent years. Previous results indicate very high efficacy of all drench classes against these worm species. A drench is still regarded as effective if it achieves a 95% reduction in faecal egg counts.

Each young ram had a faecal sample taken in July to provide an ASBV for WEC that is in this catalogue.

*I wish to acknowledge the efforts and assistance that Colin Andrews of Elanco has given us over the years in understanding and maintaining our drench program. For assistance Colin can be contacted on 0429 000 786.*

### **Understanding Lambplan FEC (or WEC ) ASBVs.**

The breeding value for worm egg counts used in the Lambplan Data is read the following way.

A value of -21% is average and the higher the negative the better. To be in the top 10% for maternal breed flocks using Lambplan -45% is needed.

## HEALTH STATUS

---

**Brucellosis Accredited** No: 589 - Expiry: 31st December 2024

**Ovine Johnes Disease** MAP MN3V No: S263 - Expiry: 27th July 2024

Our current status is MAP MN3V. Our intention is to provide the highest possible standards for the purchasers of Coolawang rams. We remain committed to the MAP with Gudair vaccination also part of our program.

The rams were shorn on the 13th July and were vaccinated with Glanery 7 in 1 B12 and were also treated with Extinosad. All sale rams will be given another Glanery 7 in 1 and a Multimin prior to sale. The drench program will also include a Zolvic Plus drench prior to sale.

## **NUTRITIONAL MANAGEMENT OF YOUR NEW RAM**

---

We encourage purchasers of stud and flock rams to discuss the post sale management of your new ram's nutrition with us.

Should their diet include hay or grain we believe that a protein level should not exceed 12% and a level closer to 10% would be better.

Good quality cereal have will provide enough roughage especially when a 100 grams of lupins every other day is included in the ration.

Over feeding with a high protein diet can lead to lower semen quality and can result in infertility which can take at least six weeks and quite often longer to reverse.

Adequate shade prior to and including mating also assists in maintaining semen quality. An extended period of heat ( ie a week in the high 30s ) can also reduce semen quality.

As well as diet the shedding of stud rams can also provide a risk to semen quality if ventilation is poor and especially if there is a build up of manure below grating. Excessive ammonia buildup has the same effect on semen quality as high protein diets.

---

# The LAMBPLAN Maternal Index Survey

## Calling all commercial producers - have your say!

Sheep Genetics is currently collecting information on flock structure and output information from commercial operators who:

- Join Merino ewes to a Maternal sire (e.g, Border Leicester) to produce first cross sheep
- Breed from first cross ewes
- Purchase Maternal rams for a self-replacing flock

As indexes are developed for industry, please consider commercial production system data as opposed to data from your ram breeding flock when completing the survey.

If you are a commercial producer who has more than one production system, please fill out all relevant surveys. The survey takes approx. 40-60 minutes to complete.

## ASBV INFORMATION

---

This year we will continue to use ASBV's that give a wide range of traits. An index will not be included as our clients level of importance of each trait may differ. Our preferred Index at this stage is MCP+. This index focuses on growth, carcass, and reproduction traits while maintaining mature size. This index also has 5% WEC contribution which suits our program of measurement. The WEC is not part of the BLX index which is one reason for using MCP+.

We are now embarking on the use of genomics to enhance our current ASBV's as well as providing information on eating quality traits. This will enable us to provide more selection pressure on the ewes that are retained in the stud flock. The aim is to take the stud ewes to the highest possible standard as they are the future of the ram breeding enterprise. At this point this year's sale rams have had samples taken and so this next step begins.

Going forward the opportunity to test parentage will be valuable and so will enhance our data accuracy and maintain the Genetic purity of the flock.

The intention is to provide ASBV's that you will find useful and hopefully read in isolation more easily understood. We have also added AWT ( Adult weight ) as the weight of mature age sheep is now of more interest.

As usual we are providing raw data with wool microns. This year the rams will be reweighed and scanned within two weeks prior to sale so that raw data for weight, fat and eye muscle depth is available.

The Elders logo, featuring the word "Elders" in a white, cursive font on a red rectangular background.

ZOLVIX™ PLUS

SHEEP

## THE FIRST CHOICE WEANING AND SUMMER DRENCH

Your sheep need the best protection against worms for optimal health and performance. Zolvix Plus is the only combination drench that delivers the power of monepantel. Its unique mode of action provides >99.9% efficacy against a broad spectrum of internal parasites, including single, double and triple resistant strains.<sup>1,2</sup> Its **new 21-day Export Slaughter Interval** is the lowest of any combination drench containing abamectin, making Zolvix Plus the first choice weaning and summer drench. Always read and follow the label directions.
